

Rulestead — Logo Decision Studio

Phase 97 concept gate — round 4. The chosen form is **G4** — the three-way / multivariate **decision branch** (input routes to three variants; reads as multivariate feature flags). Eight *color* treatments below — copper accent, two-tone, lit route, square nodes, three-state, monochrome, no-copper — shown at real sizes on light and dark beside the **Sora Bold** wordmark. The demo renders the mark at `width="36"` — that cell is flagged.

01 Wordmark & lockups

Rulestead is wordmark-first (§14). The chosen symbol always sits beside “Rulestead” set in Sora Bold. Below: the wordmark alone, then each concept locked up with it. This is the decision-critical context the bare icons lack.

02 Concept G4 — multivariate branch color family

The three-way branch in eight color treatments, each at 16 / 36 / 64 / 128 px on a white card and a dark (#10161f) card. The 16 and 36 px cells carry a hairline ring so a small silhouette is still judgeable.

CONCEPT G4 — MULTIVARIATE BRANCH · COLOR FAMILY (ROUND 4)

G4a — Baseline (copper active)

Blue structure, Ink Blue input, top variant active in copper, the other two Ink Blue off.

G4b — Two-tone (blue + copper)

All Stead Blue + one copper active node. Cleanest two-color read.

G4c — Lit route

The arm to the active variant is copper too; the two off variants fade to Quarry. Emphasizes the selected route.

G4d — Square nodes (architected)

Square variant nodes + Slate input/off — more structural, less 'network diagram'.

G4e — Three states (multivariate)

Each variant a distinct color — copper / Stead Blue / Quarry — reading as three real variants, not on/off.

64px

128px

G4f — Monochrome (ink) · favicon/mono test

Single-ink (#183247); off variants hollow so active-vs-off survives with no color. The currentColor / favicon case.

128px

G4g — No copper (cool)

Ink Blue structure, Stead Blue active node, Quarry off nodes. No warm accent.

G4h — Square + three states

G4e's three distinct variant colors on square nodes — the most 'multivariate config' read.

03 Mineral palette

The locked palette the marks draw from. Friendly name / token / canonical hex are from `brandbook/tokens.json`; swatches whose token is exposed in `tokens.css` are filled from the `live var(--rs-*)` and drift-checked (a red “DRIFT” badge means the rendered color diverged from the canonical hex).
